File

File operations

To make an index you have to make the following steps:

1. Download a template with object description data. Or create the template yourself. The example [is here](#).
2. Fill the template with data. The data must be numbers.
3. Upload the template back so the index are to be calculated.
4. Check your table in [View](#) section and observe the [Report](#) section.

Report

Get a template

There is only one template in the database for now. You can get it in the [CSV text format](#) or in the [MS-Excel format](#). [Click here](#) to learn how to fill the template.

Feedback

Put your file to the index calculator

Now you should click the browse button to find the file in your computer and upload it. If the file is well-formatted the system switch this tab to the View tab.

Disclaimer: nobody forces you to download files from this resource or press the Upload key. Remember it especially if you will get an (improper from somebody's point of view) index.

Ratings and Indices

View

Here a copy of the uploaded table. You can check it and then go to the [Report tab](#).

	Feature1	Feature2	Feature3
Factors	1	-1	1
Object1	0,69	7,53	4,69
Object2	0,69	7,53	7,38
Object3	4,34	0,43	5,69
Object4	8,48	8,37	5,29
Object5	5,31	6,84	4,02
Object6	7,08	0,96	4,02
Object7	4,68	5,5	3,42
